Patient is a large 400lb male crocodile hunter from Louisiana. Amputation to remove toes. After 4 months the wound dehiscence had not healed and bone was visible on the medial side.

Top picture is after debridement and initial Aurix treatment is being applied.

Bottom picture is after 2 treatments. This patient wept tears of joy after the dressing was removed on the second treatment.

Patient went on to fully heal after 3rd treatment.

Chronic stalled DFU. Full course of HBOT and 10 skin subs showed no impact. 27 weeks stalled.

1st picture is pre treatment

2nd picture is 6 days after initial treatment

3rd picture is 14 days after initial treatment

After the 3rd treatment, the wound closed

2 year and 2 month stalled wound on back of patient's calf

All advanced therapies had been attempted. HBO and Skin Subs had no effect.

Pre-treatment	1st Application	2nd Application	3rd Application	4th Application	Week 6, Healed

Before Aurix Treatment

7 days After Aurix Treatment

Patient had a tunneling wound that was 8 months stalled due to radiation therapy (breast cancer). Skin subs had been used with minimal effect. The tunnel portion would not close.

The first 3 pictures are pre-treatment.

The 4th picture is during treatment #1. 5th picture is 7 days after initial treatment. 6th picture is 14 days after initial treatment. The tunnel closed after 2 treatments. She cried when the dressing was removed.
